

*In Honor of Breast Cancer Awareness Month
Fight the Good Fight--- ---Against All Cancers*

What Causes Cancer To Develop? Cancer begins in the cells which are the basic building blocks that make up tissue. Tissue is found in the breast and other parts of the body. Sometimes, the process of cell growth goes

What Causes Cancer To Develop? Wrong and new cells form when the body doesn't need them and old or damaged cells do not die as they should. When this occurs, a build up of cells often forms a mass of tissue called a

lump, growth, or tumor. Breast cancer occurs when malignant tumors develop in the breast. These cells can spread by breaking away from the original tumor and entering blood vessels or lymph vessels, which branch into tissues through- out the body. When cancer cells travel to other parts of the body and begin damaging other tissues and organs, the process is called metastasis. One in eight women in the United States will be diagnosed with

breast cancer in her lifetime. Breast cancer is the most commonly diagnosed cancer in women. Breast cancer is the second leading cause of cancer death among women. Each year it is estimated that over 246,660 women in the United States will be diagnosed with breast cancer. Although breast cancer in men estimated 2,600 men will be diagnosed. 1 Over 2.8 million breast cancer survivors are alive in the United States today.

Falling into Autumn 2017
